

Please amend the claims as follows:

1. (currently amended) A method of reducing the appearance of lines and wrinkles associated with aging of the skin, which comprises applying to the skin exhibiting the age-associated lines and wrinkles a makeup composition comprising an interference pigment having a blue or violet reflectance, combined with at least one metal oxide pigment.
2. (original) The method of claim 1 in which the interference pigment has a blue reflectance.
3. (original) The method of claim 1 in which the interference pigment has only a blue reflectance.
4. (original) The method of claim 1 in which the composition comprises titanium dioxide.
5. (original) The method of claim 1 in which the composition comprises titanium dioxide and iron oxide.
6. (currently amended) The method of claim 1 in which the composition further comprises at least one inorganic, non-matte, non-spherical powder in an amount in the range of from about 2 to about 10 percent by weight of the total composition.
7. (original) The method of claim 6 in which the powder is selected from the group consisting of bismuth oxychloride, boron nitride, barium sulfate, mica, sericite, muscovite, synthetic mica, titanium oxide coated mica, titanium oxide coated bismuth oxychloride, titanium oxide coated talc, platelet iron oxides, aluminum powder, lauroyl lysine and platelet talc.
8. (original) The method of claim 1 in which the composition further comprises bismuth oxychloride.

9. (original) The method of claim 1 in which the composition comprises from about 1 to about 9% by weight of interference pigment.
10. (original) The method of claim 8 in which the composition comprises from about 2 to about 8% by weight of the interference pigment.
11. (original) The method of claim 10 in which the interference pigment has only a blue reflectance.
12. (new) A method of reducing the appearance of lines and wrinkles associated with aging of the skin, which comprises applying to the skin exhibiting the age-associated lines and wrinkles a makeup composition comprising an interference pigment having a blue or violet reflectance, combined with at least one metal oxide pigment and at least one inorganic, non-matte, non-spherical powder in an amount in the range of about 2 to about 10 percent by weight based on the total weight of the composition.
